Piper MacLane's Secret Slime Recipe

Hey, it's me, Piper MacLane. I'm going to share my favorite slime recipe with you. You should have your parents help you make it so that you don't get in trouble the way I did. You only need three ingredients:

1. A 6-ounce bottle of white or clear school glue

2. ½ teaspoon baking soda

3. 1½ tablespoons contact lens solution that includes boric acid and sodium borate

First, squeeze the whole bottle of glue into a bowl. Next, add the baking soda and mix it up.

Want your slime to be stretchier?

Add a few tablespoons of water.

After that, slowly mix in the contact lens solution.

You can also add food coloring or glitter to make your slime more colorful or sparkly! Mix it up with your hands until it's smooth and stretchy.

Your slime might not come to life the way that Cosmo did, but you'll have a lot of fun making it!
